

Sampo Kellomäki

MSc (Computer Science)

Sampo Kellomäki has founded two software startups, Symlabs SA (identity management and directory services) with a successful exit (sale to Quest Software), and Synergetics SA (privacy and personal data management). He has also been an angel investor and director in other startups.

In a technical capacity, he has contributed to identity management and identity federation standards (SAML, Liberty Alliance), architected security for several telecom operators including Vodafone, Vizzavi (UK), and Light-Squared (US), contributed to several cryptographic protocol implementations (including OpenSSL and SSH), and has extensive experience from datacenter and cloud system administration practice.

- His role has typically been Chief Technology Officer (CTO) and leader of architecture and development team. He has also done consulting and identity management projects with several telecom operators.
- Strong background in cryptography, credential management, identity management, and privacy, including contributing to several standards in the area (SAML, Liberty Alliance)
- Good familiarity with telco-grade operations and datacenter and cloud system administration practice
- Chief Technology Officer (CTO) and architecture as well as software team leader experience
- Web sales and marketing experience in the context of selling a software product to an international market
